DETAILED ACTION

1. Amendment filed on 12/29/2004 has been entered.
2. Claims 1-10 are presented for examination.

Response to Arguments

3. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

- The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).
5. Claims 1-2h are rejected under 35 U.S.C. 102(e) as being anticipated by Pekny (U.S. Patent No. 6,385,091).

Regarding claim 1, Pekny discloses a nonvolatile semiconductor memory device (Figure 5) , comprising:

- a plurality of blocks (150) each having a memory cell array;
- a reference cell (160, Column 6, lines 3-6, ABSTRACT);
- a signal line (REFWL)that supplies a reference signal read from said reference cell to each of said plurality of blocks (Column 6, lines 3-12);
- a reference load circuit (300) which is provided in each of said plurality of blocks (Column 6, lines 33, a block read) , and imposes a load on the reference signal that is identical to a load imposed on data that is read from said memory cell array (Column 6, lines 33-45, lines 56-) ; and
- sensing circuit (Figure 4, 117) which is provided in each of said plurality of blocks, and compares the data with the reference signal having the load imposed thereon by said reference load circuit so as to sense the data (Column 9, lines 1-12).

Regarding claim 2, Pekny discloses wherein said reference load circuit (Figure 6, 300) includes a pass gate (330) that allows the reference signal to go therethrough only in one of the blocks that is selected (Column 7, lines 1-7).

Allowable Subject Matter

6. Claims 3-10 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 3-10 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Pekney (U.S. Patent No. 6,385,091), and others, does not teach the claimed invention having a Y gate which is provided in each of said plurality of blocks, and selects the data read from said memory cell array, wherein a gate at a last stage of said Y gate and said pass gate are structurally identical as circuit elements, and are driven by the same potential.
